- The module is compatible with Prestashop eCommerce Version 1.4.0 and above

Requirements:

- The Prestashop eCommerce Version 1.4.0 and above is required for this module to work.

- Requires Facebook Application ID and Secret Key generated for your website

Installation and Configuration:

Installation:

- You can install the module through Module install feature in Administrator end

- After login to the website, go to Admin -> Modules -> Add a module from my computer

- Then upload 'Module file' from your computer (the zip archive of egrfacebook.zip) and Click 'Upload this module'

- Then search for 'egrfacebook' under 'Front Office Features' category in the module listing page and install 'Social Connect Facebook module'.

- Alternatively you can install the module manually by following steps

- Unzip the downloaded module archive file.

- Copy the folder "egrfacebook" from the path "YOUR_PrestaShop_ROOT/MODULE" and paste to the related path in your PrestaShop folder.

- Go to Admin section, select the Egrove Social Facebook Module under 'Front Office Features' category in the module listing page and install 'Social Connect Facebook module'.

Module Settings:

After successful install, under Social Connect Facebook module, Configure the module settings

- Set up your Facebook application app id and secret key for module to work.

- Set up or enable or disable the options

- Save settings, go live and help your website users to stay connected.

Custom Hook for FBLogin Snippet:

- We have created a new hook for fblogin button rendering any part of the site pages.
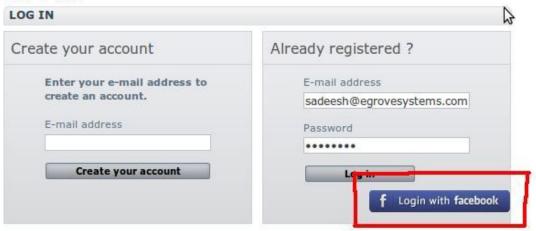

- It required you manually copy the a word of content to any template(.tpl) file where you want to render facebook login button.

- This is very simple process to do, for example if I want to have facebook login button on my login page along with site login form. Sample code snippet and render review provided below:

```
<form action="{$link->getPageLink('authentication.php', true)}" method="post" id="login_form" class="std">
    <fieldset>
        <h3>{l s='Already registered ?'}</h3>
        <p class="text">
            <label for="email">{l s='E-mail address'}</label>
            <span><input type="text" id="email" name="email" value="{if isset($smarty.post.email)}{$smarty.post.ema
        </p>
        <p class="text">
            <label for="passwd">{l s='Password'}</label>
            <span><input type="password" id="passwd" name="passwd" value="{if isset($smarty.post.passwd)}{$smarty.p
        </p>
        <p class="submit">
            {if isset($back)}<input type="hidden" class="hidden" name="back" value="{$back|escape:'htmlall':'UTF-8'
            <input type="submit" id="SubmitLogin" name="SubmitLogin" class="button" value="{l s='Log in'}" />
            {$HOOK_EGR_FBLOGIN}
        </p>
        <p class="lost_password"><a href="{$link->getPageLink('password.php')}">{l s='Forgot your password?'}</a></p>

    </fieldset>
</form>
```
